6 rue Jalna, 78370 Plaisir, France

Career Objective: To obtain a research-based internship in Biology

Education

École Normale Supérieure Paris-Saclay 2024 - Present
Master 1 Biologie-Santé *Gif-sur-Yvette, France*
Equivalent to the first year of a Master's degree in Life Sciences and Health
Key courses studied include: Microbiology, Molecular Biology, Genetics, Cell Biology, Immunology, Biochemistry

Université de Versailles Saint-Quentin-en-Yvelines 2021 - 2024
Licence double-diplôme Chimie, Sciences de la vie (240 ECTS) *Versailles, France*
Equivalent to a Dual Bachelor's degree in Chemistry and Life Sciences
Valedictorian
Key courses studied include: Molecular and Cell Biology, Genetics, Biochemistry, Organic Chemistry, Analytical Chemistry

Lycée Jean Vilar 2018 - 2021
Baccalauréat mention très bien avec les félicitations du jury *Plaisir, France*
Equivalent to A-levels in science subjects obtained with highest honours
Key subjects studied include: Biology, Physics, Chemistry, Mathematics, English

Professional Experience

Research intern at IBPC (Institut de Biologie Physico-Chimique) June 2023 - July 2023
2-month internship within the "Microbial Genetic Expression" Unit (UMR8261 CNRS) *Paris, France*

- As a Research Intern within the "RNA control of gene expression" team, I studied the regulation of gene expression in *Escherichia coli.*
- For the project, I needed to carry out several laboratory techniques such as northern blot, bacterial transformation, site-directed mutagenesis and β-galactosidase activity assays.
- I had the opportunity to develop my analytical thinking skills and gain a deeper understanding of the scientific approach.

Part-time student worker - Course reviewer, Université de Versailles Saint-Quentin-en-Yvelines May 2023 - June 2023
Course reviewer for the HILISIT project (Hybridation en LIcence ScIenTifique) *Versailles, France*

- I was selected to participate in a project where I reviewed and corrected course materials written by university lecturers and researchers. The courses were centered on the core topics of molecular biology and were designed to serve as online educational resources for undergraduate students.
- This project allowed me to reflect on course structure and adapt concepts according to the students' proficiency levels.

Technical and Language Skills

Foreign Languages

- I have good command of English, supported by my score of 7.5 (equivalent to a C1) on the IELTS examination.
- I am a native speaker of French.
- I have a good working knowledge of Spanish and basic knowledge of Korean.

Programming Languages

- I have a good working knowledge of Python.
- I am familiar with R.

Personal Interests

- I have been engaged in sports since childhood, initially with classical ballet for 10 years, followed by club volleyball for the past 5 years, along with Pilates and Yoga. Team sports have helped me develop team-working and communication skills, while sports in general have taught me perseverance and discipline.
- I am a volunteer at a neighborhood council, where during the summer of 2024, I assisted primary school students with their homework twice a week for two months. This experience taught me how to adapt to different profiles and develop a pedagogical approach to support the students.
